Whereas Ghent City Museum’s permanent exhibition will show what it is that makes Ghent Ghent, its temporary exhibitions will show what makes a city a city. Ghent has a thing about light (award-winning lighting plan, light festival 2011) and so for its grand opening STAM has decided to put the spotlight on the city - not just figuratively but also literally.

STAM occupies historically important buildings on the Bijloke site, a green oasis close to the centre and a haven of culture on the banks of the River Leie (Lys). The temporary exhibition ‘Enlightened City’ will be mounted in the seventeenth-century monastery building which is an integral part of the fourteenth-century Bijloke Abbey. It links up seamlessly with STAM’s twenty-first-century extension. The monastery building certainly does not leave the visitor unmoved: the light that filters through the monastery windows plays on walls and ambulatory and in the evenings the whole of Bijloke Abbey is lit by Ghent’s lighting plan.
A city is a permanent ‘chiaroscuro show’: squares bathe in sunlight, tower blocks cast their shifting shadows, town houses reach for the light, a cheerful cacophony of light banishes the night, artificial light attacks our biorhythm, dark sides of the city spurn the bright lights... Life in the city is conditioned by light and darkness. This is the usually underexposed starting-point of the fascinating exhibition with which the new STAM opens its series of temporary exhibitions about urbanity: Enlightened City.

light and life
How does a blind person experience the city? That question, so intriguing for sighted people, opens the first STAM exhibition. We set about examining how light and the lack of light affect a city’s development and life in the city. Take the pre-industrial age, when the rhythm of life followed the natural day-night pattern. Was it really so? How did light and darkness dictate what people did? The introduction of artificial light in the nineteenth century triggered a revolution: night became day, as people said at the time. It had a dramatic effect on all aspects of life: on working life and the economy, but also on social life and on the hours we slept.
The exhibition uses documents and diaries, maquettes, paintings, photographs and installations to tell this story. And it does so in an extraordinary location: the old Bijloke Abbey. We also link Ghent with the world: for a twenty-four-hour period a video installation connects the contemporary city with the world through the ‘City One-Minutes’ project: one-minute films of cities in different time-zones.

**twin maquettes and stained-glass windows**

Are we seeing an evolution towards more light in urban development and in the architecture of our homes? Did modernism invent ‘light living’? The exhibition sheds light on several carefully chosen places and buildings. Using twin maquettes and a solar simulator we examine the incidence of light in the life of striking buildings at two different times.

We end in the old abbey church, the perfect place to take a look at how light is deployed symbolically: STAM’s magnificent collection of stained-glass windows will glint and gleam, we will show how light and propaganda, and faith and light coexist harmoniously, how a light-filled city makes itself the leading light and sets about celebrating light…

*Can you see those lights, said a to b.*
*I’m the big city. There’s everything there.*
*I can live there if I choose.*
*Yes, said b. Yes. Me too, a.*
*(Esther Jansma)*

3. Information for the public

(There may still be a few changes)

where

STAM, Bijloke site, Godshuizenlaan 2, 9000 Ghent

when

• October 9th 2010 to May 1st 2011
• from 10 to 18.00 hrs
• closed on Mondays
• closed on December 24th, 25th, 31st and January 1st

to combine with the light festival

- city trail enhanced with light, lighting and light art
- from January 27th to 30th 2011

to combine with light walks in the city

- unique lighting of streets, squares and buildings – the Ghent lighting plan won an international award in 2004

to combine with the permanent exhibition at stam
- ghent city museum and a city visit

- chronological trail as an introduction to a visit to the city
- opening times are the same as for ‘Enlightened City’
toegangsprijzen

• normal price:
  ◆ €6 for adults
• concessions:
  ◆ groups (min.15 people), senior citizens 55+ and others entitled to a discount: €4.50
  ◆ ages 19 - 26: €1
  ◆ ages 0 - 18: free
  ◆ Ghent citizens: always entitled to a discount and on Sundays (10 to 13.00 hrs) admission is free
• With the same ticket you can also visit STAM’s permanent exhibition

facilities

• full access for wheelchair-users
• texts in Dutch in each gallery
• café-restaurant
• cultural-tourist information desk

publication

• international publication comprising essays on various themes
• edited by Patrick De Rynck
• designed by Gert Dooreman
• published by Lannoo
• aimed at the general public and beautifully illustrated
• available from the museum shop during the exhibition and from bookshops
• languages: Dutch with English summary

groups

• choice:
  ◆ tour of the exhibition in the company of a guide
  ◆ light festival, light walks and STAM permanent exhibition packages
  ◆ combine your STAM visit with a boat trip
• booking essential – minimum 2 weeks in advance
• museum guides
• languages: Dutch, French, German, English, Spanish (interpreter for the deaf on request)
• maximum 20 people
• duration: ca. 1 ½ hours
• guided tour: €75

5.1 light and the rhythm of life

The rhythm of day and night dictates people’s lives. The exhibition shows how over the centuries the invention and introduction of artificial light has changed that rhythm. It looks at the role played by sunlight and daylight in daily life: from the history of the bleaching fields on the outskirts of the city to dark, narrow alleyways in the centre, from parasol to sunglasses. In the pre-industrial age, the length of the working day was inexorably determined by the position of the sun. The development of artificial light brought a change that was nothing short of revolutionary. That invention gradually enabled us to subjugate the evening, night and darkness.
In the C18 women wore a mask to protect themselves against the sun and preserve their pale completion. STAM, Ghent City Museum collection

Photographic diary of the Ghent “facteur charmeur” Rudy Châtelet
city one minutes

A video installation illustrates the connection between different places in the world in the same 24-hour period. Twenty monitors, twenty meeting-places in the world show how the rhythm of day and night differs in each place at a given moment and also how different life is in each place.

Video installation showing one-minute films of twenty metropolises from different time zones (personal artistic impressions of the city consisting of 24 one-minute portraits each of which illustrates one hour in the day)
5.2 light and architecture

Light plays an important role in urban development and architecture. Indeed, light is a dominant factor in the modern city and its buildings. Over the centuries more and more daylight has been brought into buildings. For example, the development of new technologies, materials and construction methods meant windows could become larger and larger. Walls with openings in them evolved into façades consisting of one large expanse of glass, rooms which were once dark internal spaces became contemporary interiors bathed in light.

As the fabric of the city is restructured and redeveloped, more light is brought into urban spaces during the daytime.

_twin maquettes and solar simulator_

We show parts of the city, houses and buildings which were transformed in such a way that the incidence of light (day) and lighting (night) changed dramatically. Two maquettes were made of the same place for the two different periods: before and after the transformation. A solar simulator lights the maquettes.

As well as installations, amazing illustrations show light and shadow on buildings and places down the centuries.
twin maquettes

A single space contains five twin maquettes you can walk round. A solar simulator lights up the maquettes and completes a 24-hour period in 20 minutes so that you can see how light evolves at different times of day, shedding light and casting shadows. For example, in the case of the Groenebriel, one maquette shows what the district looked like before the 1950s when it was still a maze of little alleyways, while the other maquette shows what it looks like today with blocks of flats on pylons surrounded by greenery. Where relevant, as in Het Licht printing plant, the lights go on after sunset.

Het Licht printing plant - Vooruit
The conversion and expansion of a comfortable nineteenth-century house into a modernist printing plant (designed by the architect Brunfaut). During the daytime the workshops are bathed in light and in the evenings the façade acts as a beacon.

1890, façade before conversion into printing works
1950, façade of the printing works

Conversion of a terraced house with a building at the rear into a house with a free-standing workshop at the back (designed by architect Jan de Vylde)

Chic department store with large glass domed atrium and narrow galleries around the void, 1921, André Verbeke collection

Interior of the Grand Bazar, 1967, a modern department store with built-in fluorescent lighting as a substitute for daylight.

Solar simulator
Design for a solar simulator for the ‘Enlightened City’ exhibition, Department of Mathematical Physics and Astronomy Ugent
5.3 Light as a symbol

Traditionally Darkness stood for dark perilous forces, for the devil, danger, fear of the invisible and furtiveness, but also for intimacy. Light has always been associated with good, the divine, optimism and truth. In the eighteenth and nineteenth centuries Light also began to represent progress, rationality and modernity. More democratic forms of government and the emancipation of the masses were also associated with light.

Our cultural heritage illustrates the symbolic meaning of Darkness and Light for man and society. This meaning is apparent in our language, art, objects, religious and political ‘propaganda’, films and photographs.

The positive meaning of Light is also expressed in the great importance attached to festivity. In the old days for the Joyful Entries of sovereigns or their representatives oil burners or braziers were placed on important buildings. This meaning of Light lives on to this day in Christmas lights, light processions, light festivals, etc. and in fireworks. A firework display is a light spectacle which has retained its meaning and its appeal down the centuries.

from the stained-glass collection

STAM has a collection of stained-glass of the highest quality dating from the sixteenth century. The stained-glass shows not only religious symbolism but also more profane meanings of Light.
The exhibition culminates in STAM’s baroque abbey church, the perfect setting to illustrate the symbolic meaning of light and dark. © Phile Deprez
